

Webster Combustion - Your partner for a **NET-ZERO** future.

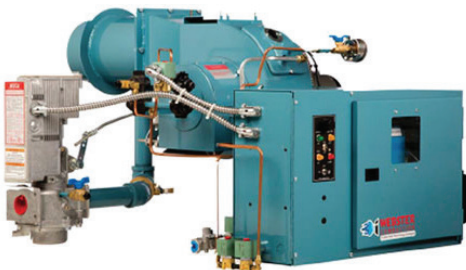

Webster Combustion can help boiler room managers comply with the new net-zero emissions policies currently being proposed and implemented throughout the country.

These initiatives will require businesses, governments and other sectors of society to reduce their greenhouse gas emissions by as much as 50% by the year 2050. To do this, boiler equipment will have to be retrofitted to burn clean biodiesel fuel. Webster boiler burners are:

- UL-listed for use with B20 Biodiesel blended fuel
- Proven to reduce energy costs and emissions
- Critical in the effort to reduce the carbon footprint

Webster Makes It Easy To Get To Net-Zero Carbon Emissions

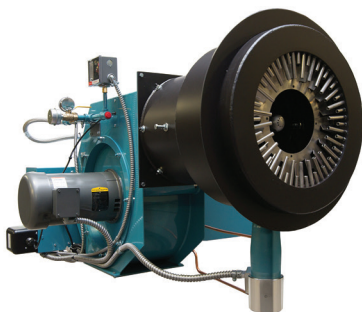

Webster has been providing boiler burner innovation and value for nearly a century so you know your project will be in expert hands from start to finish.

JB Series Multi-Fuel Burners

**JBS Series High Efficiency,
High Turndown Burners**

**JBE Series High Efficiency,
High Turndown Burners**

**HDS Series High Efficiency,
High Turndown Burners**
